

# Discover Webair

Webair is a high-touch managed services provider that combines the best of both technical and human ecosystems in its state-of-the-art data center facilities. While technologies may change, Webair's ability to properly manage them at scale for customers does not. At Webair, responsiveness, agility and customer support are the very pillars of our success.

## The Webair Value

Webair takes full ownership and responsibility of customers' infrastructure so that their IT resources can focus on adding value to their business. This includes managing, monitoring, securing, and scaling components such as Private Cloud, Public Cloud, DDoS Mitigation, CDN, Load Balancers, Firewalls, Caching, Databases, and multiple applications stacks such as LAMP and SAP. By managing the entire stack, Webair ensures each layer's technology and configuration is compatible and scalable with the larger infrastructure. Webair accomplishes this by employing a global network of Tier III, HIPAA-compliant and SSAE 16 data centers located on the East and West Coasts as well as Europe. Webair also maintains an advanced fiber optic network, proprietary automation software, and best-of-breed third-party commercial and OSS software.

### Private & Public Cloud

- Multiple options for Virtual Private Cloud (VPC), Dedicated Private Cloud, Public Cloud and Hybrid Cloud available
- Ideal for customers seeking a fully managed solution
- Full range of DR options across multiple data centers using Zerto
- High-performance and fully redundant enterprise-grade network, compute and storage infrastructure leveraging Cisco UCS, Cisco Nexus, EMC and Nimble Storage
- Direct provisioning, rapid configuration and deployment via well-documented, open API and customized control panel
- Direct, secure connectivity to third-party cloud providers including AWS, Azure and Google Cloud Platform, as well as colocation environments and customer premises

### Full Stack Management & Hosting

- Fully Managed, Linux-based web, application, database, mail, backups, and caching servers
- Global CDN network
- Fully managed and highly available Load balancing-as-a-Service with integrated security mitigation
- Full ownership of every layer in the technology stack including scale, security, compliance and 24x7x365 monitoring

### Managed Security

- Managed Cloud and physical firewalls including Palo Alto Networks, Juniper Networks and Cisco
- Volumetric and Proxy-based DDoS monitoring and mitigation
- 24x7x365 firewall monitoring and management including IDS, IPS, WAF, VPN and HA

# Discover Webair

## Colocation

- Combine traditional Colocation with Cloud computing environments and managed hosting
- Seamless scalability from Colo to Cloud compute, Cloud storage and iSCSI SAN, as well as a wide variety of other Managed Services
- Direct physical cross-connect to a vast ecosystem of managed services available in the data center
- Multiple colocation options ranging from quarter racks to cages
- SSAE 16 and HIPAA-compliant; Open-IX OIX-2 certified

## Data Centers

- N+1 redundant power, cooling and connectivity, and are geographically dispersed to allow for maximum redundancy, reliability and system uptime
- Tier III, SSAE 16, HIPAA / HITECH-compliant, and Open-IX OIX-2 data center certification
- Global data center network with facilities in New York, Los Angeles, Amsterdam and Montréal

## Managed Backups

- Built-in hybrid, daily and weekly backups options
- Multiple offerings including Veeam Cloud Connect
- Ability to connect to backups via Internet VPN or direct network connections
- Ability to spin up VM backups on Webair's Public Clouds
- Fully PCI and HIPAA-compliant solutions with full customer segmentation
- Flexible, cost-effective pay-as-you-grow subscription models

## Disaster Recovery-As-A-Service (DraaS)

- Enterprise-class Disaster Recovery for virtualized and Cloud environments powered by Zerto
- RTOs in minutes and RPOs in seconds
- Fast data and application recovery and restoration, whether workloads reside in customer data centers or in Webair's Cloud
- VM-centric, hardware-agnostic
- Easy integration with third-party services via APIs to automate any required changes or notifications
- Customizable network integration including direct connectivity to customer networks and / or to BGP swings
- Access to a full suite of ancillary DR services including SAN-to-SAN replication, Colocation and always-on VMs
