

Off-site Backups-as-a-Service

Webair's Off-site Backups-as-a-Service (BaaS) help businesses enjoy reliable, long-term backup, storage and recovery of data and applications on dedicated, secure and reliable off-site infrastructure.

Full Stack Ownership and Accountability

Webair has been managing backups for thousands of production workload customers for more than 15 years. This comprehensive solution includes extensive monitoring and management with full accountability and ownership of the entire solutions, providing companies with a secure and effective way to outsource their backups solutions. With its BaaS solution, Webair guarantees high availability of data with customizable options designed to meet customers' individual needs.

Custom-Built Solutions

Webair realizes that BaaS should never be one-size-fits-all and has built a unique solution that can be tailored to suit each customers' specific needs, including data sovereignty, encryption, compliance, latency, and application-specific support. This level of detail ensures that backups are able to run as fast as possible with minimal hardware investment and without intruding on existing operations.

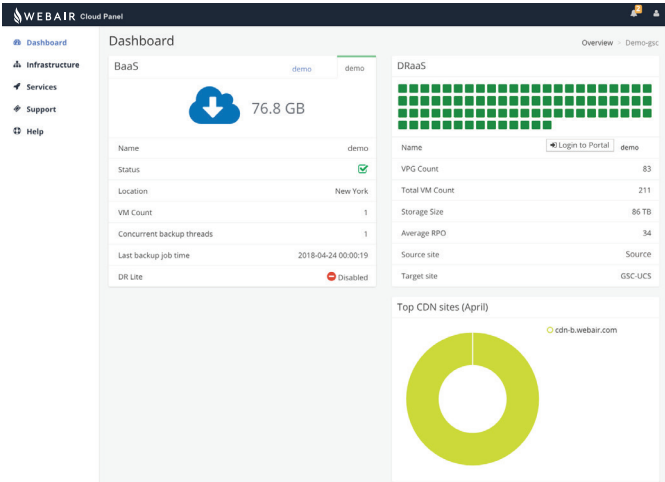

Cloud Backup Advantages

For companies requiring long-term data retention, Webair's BaaS can provide a significantly quicker, more reliable and more cost-effective option than tape-based backup. With this highly flexible solution, customers are invited to set their own retention policy with no restrictions, and are allowed to manage their own backups as well as Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs).

Webair's Off-site BaaS provides the same performance and speed as traditional on-premises backup, with the added scalability and cost effectiveness of cloud.

Key Security Features:

- ✓ Encryption of data both in transit and at rest, based on customer-provided keys
- ✓ Managed security
- ✓ Options for completely "air-gapped" and private solutions with no public internet connectivity
- ✓ Solution backed by Business Associate Agreements (BAAs)
- ✓ Data center, network and infrastructure fully owned by Webair

Key Management Features:

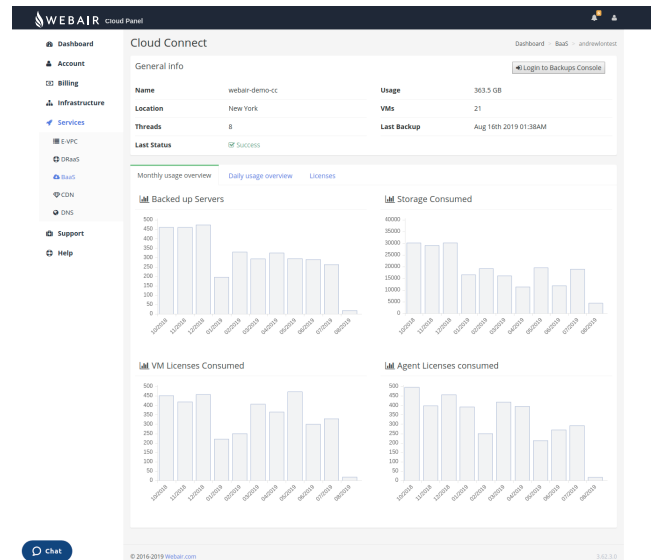

- ✓ Fully managed and monitored solution. 24x7 phone, chat, and ticket support with automated failed jobs and other notifications
- ✓ Optional Veeam Enterprise edition software, which may be utilized for local backup
- ✓ Setup, install, and configuration handled by Webair

Key Capabilities:

- Simple storage-only cost metrics with no charges for data transfer, operations or management, providing long-term retention policies at a fraction of the cost of a typical cloud model
- Ability to restore entire server images or specific files on-demand directly from customers' local consoles
- Support for VMware, Hyper-V, and physical servers running Linux or Windows, or AIX
- Only compressed and reduced change data is sent to the cloud, reducing bandwidth requirements and storage consumed
- Choose from recovery centers in New York, Chicago, Los Angeles, Montréal, London, Paris, Amsterdam, and Singapore, as well as support for all Microsoft Azure regions

Additional Available Add-Ons for BaaS:

- Veeam® Software
- Client-side software setup
- Offline pre-seeding and devices for large recovery needs
- Additional backup threads
- Monitoring of on-site local backups
- Always-on, dedicated network appliance
