

Webair Storage-as-a-Service

Secure. Redundant. Reliable. Scalable.

Store your company's sensitive and public data with Webair.

Using Webair's Cloud Storage-as-a-Service (CSaaS), built on redundant, enterprise-grade EMC® Isilon® hardware, customer data is securely stored and replicated across Webair's storage infrastructure to ensure data is protected, always accessible, and delivered at maximum speed and reliability to end-users.

Data stored through Webair's CSaaS offering can also be automatically replicated to clusters across all of our global data center locations, including New York, Chicago, Los Angeles, Montreal, London, Paris, Amsterdam, and Singapore. Because Webair's infrastructure is also HIPAA-HITECH compliant, our CSaaS solution offers maximum security and peace of mind for healthcare providers storing electronic Protected Health Information (ePHI) as well as enterprises with sensitive customer data.

Webair CSaaS is powered by enterprise-grade EMC Isilon X-Series hardware, configured at N+2 redundancy. Striking the perfect balance between large capacity, high-performance storage and scale, it is the ideal solution for healthcare, broadcast/media, research laboratories and any organization managing Big Data. The EMC Isilon X-Series uses a highly versatile yet simple scale-out storage architecture to speed access to massive amounts of data, while dramatically reducing cost and complexity.

Webair provides 1TB of FREE storage for new customers on this platform

Customer Benefits

- Highly efficient storage and scalability
- Use public internet, VPN, or direct connectivity for data transfer
- VMware backups stored on this platform can be spun up directly onto Webair's Public or Private Clouds
- Built-in snapshots
- Reduced points of failure and improved delivery speed
- Leverage Isilon SyncIQ to continuously replicate data in real time to meet specific SLAs
- Ability to replicate data to Webair's SSAE 18 SOC 2 TYPE II Certified and HIPAA-HITECH compliant data center locations around the globe
- Data transfer between storage nodes and customer infrastructure is segregated to ensure PCI-DSS and HIPAA-HITECH compliance

Pay Only for What You Use Across All of Our Platforms

Research, healthcare, or media companies with big data sets require multiple clusters and appliances to fulfill their storage needs. But what about those with smaller requirements? With Webair, customers do not need to pay for additional storage clusters and appliances that will go unused. Webair's Storage-as-a-Service offers a right-sized, cost-effective solution that enables customers to pay only for what they use while enjoying short-term contracts. Customers can start with 100GB of storage and scale to 1PB on the same platform. Once their data sets grow large enough, Webair makes migrating to their own cluster simple and efficient.

Enhance Your Storage-as-a-Service with Webair Disaster Recovery

Your company has chosen EMC Isilon for its mission-critical production environment and primary data storage. Shouldn't your off-site Disaster Recovery solution be equally robust?

Organizations requiring an off-site disaster recovery solution can take advantage of Webair's Disaster Recovery-as-a-Service (DRaaS) offering in conjunction with its Storage solution. Webair's DRaaS offers optimized, speedy recovery and restoration of critical business data and applications in the event of a disaster.

Webair's DRaaS keeps data safe by automatically replicating servers and infrastructure in the Cloud to any of our Disaster Recovery data centers across the globe should a primary site failure occur. Webair also offers Disaster Recovery seats at its multiple data center locations.

Customer Benefits

- Direct connectivity to end-users' on-premise location; replication can happen over public internet, VPN, or direct connectivity
- Each customer is segmented into their own dedicated Virtual Local Area Networks (VLANs) and storage area for secure data storage/transmission
- HIPAA-compliant EMC Isilon hardware is used at Webair Disaster Recovery locations
- Ability to come on-premise to copy data to physical discs
- RTOs and RPOs of minutes
- Seamless DR environment for testing and production switchback

Replicate Data to Any of Webair's Global Data Center Locations
