

Discover Webair

Webair is a high-touch managed services provider that combines the best of both technical and human ecosystems in its state-of-the-art data center facilities. While technologies may change, Webair's ability to properly manage them at scale for customers does not. At Webair, responsiveness, agility, and customer support are the very pillars of our success.

The Webair Value

Webair takes complete ownership and responsibility of customers' infrastructure so that their IT resources can focus on adding value to their business. This includes managing, monitoring, securing, and scaling components such as Private Cloud, Public Cloud, DDoS Mitigation, CDN, Load Balancers, Firewalls, Caching, Databases, and multiple applications stacks such as LAMP and SAP. By managing the entire stack, Webair ensures each layer's this by employing a global network of Tier III, HIPAA-compliant, and SSAE 18 data centers located on the automation software, and best-of-breed third-party commercial and OSS software.

Private & Hybrid Cloud

- Multiple options for Virtual Private Cloud (VPC), Dedicated Private Cloud, Public Cloud, and Hybrid Cloud available
- Ideal for customers seeking a managed cloud solution Full range of Disaster Recovery options across multiple data centers using Zerto
- High-performance and fully redundant enterprise-grade network, compute, and storage infrastructure leveraging Cisco UCS, Cisco Nexus, EMC and Nimble Storage
- Direct provisioning, rapid configuration, and deployment via well-documented, open API, and customized control panel
- Direct, secure connectivity to third-party cloud providers including AWS, Azure, and Google Cloud Platform, as well as colocation environments and customer premises

Virtual Desktop Infrastructure

- A secure remote work solution that allows your staff to work from anywhere, on nearly any device
- Simple and user-friendly so that your entire organization can use the platform with ease
- One flat-rate subscription and one fee per user with no surprise costs, hidden fees, or overages
- High-performance, built-to-scale solution that pairs best of breed hardware and software with dedicated infrastructure
- Simple, easy-to-use automation to mass deploy new systems or tools for your VDI users
- Customizable VDI environment tailored to your unique needs
- Enhance productivity and efficiency of your workforce

Discover Webair

Off-site Backups-as-a-Service

- Built-in hybrid, daily and weekly backups options
- Multiple offerings including Veeam Cloud Connect
Ability to connect to backups via Internet VPN or direct network connections
- Ability to spin up VM backups on Webair's Public Clouds
Fully PCI and HIPAA-compliant solutions with full customer segmentation
- Flexible, cost-effective, pay-as-you-grow subscription model

Colocation

- Combine traditional Colocation with Cloud computing environments and managed hosting
- Seamless scalability from Colo to Cloud compute, Cloud storage and iSCSI SAN, as well as a wide variety of other Managed Services
- Direct physical cross-connect to a vast ecosystem of managed services available in the data center
Multiple colocation options ranging from quarter racks to cages
- SSAE 18 SOC 2 TYPE II and HIPAA-compliant; Open-IX OIX-2 certified

Disaster Recovery-as-a-Service

- Enterprise-class Disaster Recovery for virtualized and cloud environments powered by Zerto
- RTOs in minutes and RPOs in seconds
- Fast data and application recovery and restoration, whether workloads reside in customer data centers or in Webair's Cloud
- VM-centric, hardware-agnostic
- Easy integration with third-party services via APIs
- Customizable network integration including direct connectivity to customer networks and/or to BGP swings
- Access to a full suite of ancillary DR services including SAN-to-SAN replication, colocation, and always-on VMs

Data Centers

- N+1 redundant power, cooling, and connectivity
- Geographically dispersed to allow for maximum redundancy, reliability, and system uptime
- Tier III, SSAE 18, HIPAA/HITECH-compliant, and Open-IX OIX-2 data center certification
- Global data center network with facilities in New York, Chicago, Los Angeles, Montréal, London, Paris, Amsterdam, and Singapore
